

\$KYOKO - Kyoko The Koala

Whitepaper v1.0 14 April 2026

Building Real Value in Silence. From Hype to Help.

Token Address (Solana): **9V1rgxgA82qSLezo9msMjnM8vcKDdzXJqiou5w8wpump**

Executive Summary

\$KYOKO is a purpose-driven memecoin built on the Solana blockchain that turns internet culture, memes, and entertainment into real-world positive impact.

At its core, \$KYOKO combines koala conservation efforts, high-quality animated storytelling, and an upcoming mobile game, all powered by clean zero-tax fair-launch tokenomics.

We are committed to donating 50% of all Pump.fun creator rewards directly to verified **koala rescue centers and rehabilitation programs** in Australia.

- 10–15% will be dedicated to prizes, rewards, and fidelization programs inside the upcoming mobile game. This includes in-game competitions, special events, exclusive items, and ongoing rewards for active players and loyal holders.
- The remaining portion supports sustainable growth, new content creation, marketing efforts, and broader community initiatives.

As the project grows stronger, we may adjust these percentages slightly while always keeping conservation and community rewards as top priorities.

In today's crypto space, there are very few projects that truly build something meaningful and refuse to give up when things get tough. Many teams simply launch endless new tokens, hoping that one of them will randomly take off and make them rich quick. We believe this approach is flawed. Instead, we are convinced that bringing **real value** to the table and staying consistent over time will benefit the community and the project in a much deeper and more **sustainable** way.

This is not another quick-flip hype coin designed for fast pumps and dumps. \$KYOKO is built by **OG Solana developers** who have already proven themselves - our last project successfully reached a \$1 million market cap . We don't chase short-term hype. We build day by day, episode by episode, and brick by brick.

Along the way, we have met incredible people who share the same vision, and we continue to believe strongly in the old-school spirit of **OG devving** - the way things were done back in the day, with honesty, hard work, and real commitment.

Kyoko is not an invented character. He is a real koala who was rescued, treated for serious illness, went through multiple rehabilitation phases, completed a soft release with his buddy, and was eventually released back into the wild once he was strong and fully prepared. We have simply given voice to his true story. Through **\$KYOKO**, we tell his inspiring journey to show the world that recovery is possible, that unity and support go a long way, and that even the smallest actions can create meaningful change.

iOur goal is to create a project that people can **believe in again.**

The Problem We Are Solving

Koalas, one of the most beloved animals on the planet, are facing a serious crisis. Experts warn that they could become **extinct** in the wild as early as **2050** if current trends continue.

The main threats include massive habitat loss from deforestation, devastating bushfires, and the rapid spread of diseases such as chlamydia, which weakens entire populations.

At the same time, the crypto and **memecoin space has a growing trust issue**. Too many projects launch with big promises, generate massive hype for a few days or weeks, and then slowly (or suddenly) fade away, leaving holders feeling **rugged and disappointed**. Many people have **lost money** and, more importantly, **lost hope** in the ecosystem after putting their trust in viral memes that crashed to zero almost overnight.

\$KYOKO was created to address both of these problems at once: helping save real koalas while rebuilding trust through consistent building, transparency, and genuine community focus.

Our Solution - The Full \$KYOKO Ecosystem

1. The Real Story of Kyoko

Kyoko is a real rescued koala, not a fictional mascot created for marketing.

He was found in poor health, suffering from disease and the effects of habitat destruction. He received dedicated veterinary care, went through several challenging rehabilitation phases, and then participated in a careful soft release program together with his buddy (another rescued koala).

After months of preparation and monitoring, Kyoko was successfully released back into the wild, **healthy and ready to thrive**.

By giving voice to Kyoko's real-life story through animated episodes, we aim to inspire people around the world. His journey proves that **with the right support, care, and unity, recovery and second chances are possible** - both for animals and for our community in crypto. Every episode carries this powerful message: **unity goes a long way**.

2. Real Conservation Impact

A core pillar of \$KYOKO is making a tangible difference for koalas. We have committed to **donating 50%** of all creator rewards generated on Pump.fun straight to verified wildlife hospitals and koala rescue organizations in Australia. These donations are not hidden - they will be fully public, with **proof posted regularly** on our social channels so everyone in the community can see the real impact.

As the project grows stronger, we may even increase this donation percentage in certain phases. Every buy and every bit of volume doesn't just move the chart - it literally helps rescue, treat, and protect koalas in need, just like Kyoko was helped.

3. Entertainment & Content Flywheel

We believe that a strong project needs great storytelling and consistent content to keep people engaged. That's why we are producing weekly animated episodes of "**Kyoko The Koala.**" The first episode is already out, and the quality keeps improving.

We have already released a special collaboration episode with **\$VLTN (Velatron)**, which is live on YouTube and Pump.fun. More collabs and surprises are in the pipeline. Our content is not limited to one platform. We are actively posting on **X, TikTok, and YouTube** every day - including short-form clips, episode teasers, behind-the-scenes moments, funny memes, and educational content about koalas.

This multi-platform approach helps us reach new audiences and keep the energy high. We also **host regular X Spaces** and go live on Pump.fun from time to time so we can talk directly with the community, answer questions, and share updates in **real time**.

4. Community-First Philosophy & Fidelization

We strongly believe that organic growth and real believers are the perfect match for \$KYOKO.

We don't want fake hype or temporary holders. We want people who understand the mission and are in it for the long run.

That's why we make it a priority to listen to our community and involve them as much as possible in shaping the future trajectory of the project. Your voices, ideas, and feedback truly matter to us.

To fidelize and reward our early adopters and loyal supporters, we have exciting plans:

- Featuring community members directly in our cartoon episodes
- Giving special passes, exclusive perks, and in-game advantages in the upcoming mobile game
- And delivering a lot more surprises along the way

Doing good can also be fun - and we are committed to making the entire journey enjoyable while creating real value.

5. Mobile Game (Launching Q2 2026)

One of the biggest milestones ahead is the release of the full Kyoko The Koala mobile game on the Google Play Store. This will be a casual, addictive game designed not only for fun but also to onboard new people into crypto in a friendly way.

In the game, we will offer **exposure to other promising projects** by providing in-game promotional slots and features.

This creates a powerful space where different projects can collaborate and support each other. In this way, unity appears again - just like in Kyoko's real story of recovery through support and teamwork.

The game becomes more than entertainment; it becomes a platform that fosters community collaboration and shared success. The game will also include leaderboards, rewards, and many community-focused features - all powered in part by the 10–15% allocation for prizes and fidelization.

Team & Philosophy - We Build

We are OG devs with real experience and proven execution. Our previous project reached \$1M market cap. We are not motivated by hype cycles or short-term gains.

We are value-based builders who focus on consistent delivery - releasing new episodes on time, pushing game development forward, making real donations, and growing the community steadily. True value is built in time - day by day. We grow stronger with every piece of content we release and every positive action we take.

Our community appreciates and supports things that are done well.

This project is meant for likeminded people who think long-term, believe in organic growth, and want to be part of something meaningful.

If you are only looking for a quick buck, \$KYOKO might not be the right fit for you.

But if you believe in building something that can last and actually make a difference, then welcome home to the Koala Gang.

We build in silence today - tomorrow it will be loud.

We are actively looking for you - the person who has been rugged before, who lost hope in the crypto ecosystem, who once put trust in a viral meme that went to zero super quickly. You are our target audience. We want to find all of you and give you real hope again. Together, we can restore trust in good projects that actually deliver.

Risks & Disclaimer

\$KYOKO is a high-risk meme coin swimming in a market more volatile than a caffeinated koala on a eucalyptus bender. The price can moon harder than Kyoko after a good nap... or it can drop faster than a koala falling out of a tree while napping.

There is a very real possibility you could lose your entire investment - yes, even your lunch money.

This whitepaper is purely for informational and educational purposes. It is not financial advice.

We're just a bunch of OG devs building with heart, not your financial advisor. Always do your own research (DYOR), never ape in more than you can comfortably afford to lose, and remember: if it sounds too good to be true, it probably is... **unless it's Kyoko**, then it might actually be wholesome.
